A Wide Net? New report exposes who really sits on the EU's Fisheries Advisory Councils

Pia Engelbrecht-Bogdanov · Tuesday, November 3rd, 2026

Brussels, 3 November 2026

Transparency International EU has today published new research on a lesser-known channel of policy influence: Advisory Councils (ACs) on EU fisheries policy. These eleven councils provide the Commission with advice, but their membership raises severe concerns on fair stakeholder access. Indeed, we find:

- Fisheries ACs are disproportionately skewed towards large industry interests. These voices dominate: **70% of all AC seats are allocated to large industry players**. One Advisory Committee, the North Western Waters AC, allocates 83 % of seats to industry players.

- **Small-scale fisheries**, which make up 77% of the EU fishing fleet, **only take up 8% of all seats** and are not represented at all on two ACs (Aquaculture and Long Distance AC).

- Despite an obligation for these Councils to maintain a 60-40 split between "industry" and "other interest groups", NGOs are consistently underrepresented. **NGOs represent only 12% of all AC seats.**

- **In general, 78% of all AC seats are occupied by industry representatives, substantially exceeding the 60% quota stipulated by the rules, while other interest groups account for only 22% of seats**, falling short of the required 40%.

Shari Hinds, Senior Policy Officer at Transparency International EU, said

> “When it comes to advising the EU on fisheries policy, industry is already given a larger share of seats by the rules. Yet our findings show that in practice small-scale fishers and civil society organisations are even more under-represented. Bodies that have a say in how we manage vital resources cannot say they reflect all affected interests when their memberships are this unbalanced. Fairer fishing laws start with fair representation.”
